DETAILED ACTION

1. Applicant's response filed on 01/20/2006 has been fully considered.

Election/Restrictions

2. Applicant's election without traverse of Group I in the reply filed on 01/20/2006 is acknowledged.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1, 2, 5-7 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ishimaru et al. (US 6,610,389 B2) in view of Yamada (US 2003/0064208 A1).

Ishimaru discloses an ink jet recording material comprising a water resistance support and an ink receptive layer on the support (col. 4, line 24). The ink receptive layer comprises inorganic particles (col. 9, line 25), a hydrophilic binder (col. 10, line 24), a water soluble metallic compound such as zirconium oxychloride (col. 11, line 41), and a surfactant (col. 12, line 61). Ishimaru fails to disclose an amino acid in the ink receptive layer.

Art Unit: 1774

Yamada teaches an ink jet recording sheet comprising a support and a colorant receptive layer (abstract). The colorant receptive layer further comprises a surfactant such as amino acid of glycine [0170].

Ishimaru and Yamada are analogous art because they are from the same field of endeavor that is the ink jet recording medium art. At the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine the surfactant of Yamada with the invention of Ishimaru so as to control the surface properties of the layer.
